

Date: June 2008
Project name: Club Del Sol

Installation Address: C/ club del sol Pollenca
Mallorca – Spain.

Objective: Protect water heaters,
dishwasher and fixtures
from hard water scale,
convert existing water so
soft whiteout use of chemicals

Installed LTC: Limetech 55, LTC-55 flow 5 m³/h

Water Quality: 253 mg of calcium
Water source: Pollenca City water

Evaluation period: 3 month

Parameters: Club del sol is an urbanisation containing 26 apartments
one restaurant and one 90 m³ pool. Due to hard water
conditions problems with replacing water heaters, scaling
in pipes, problems with effective cleaning both indoors
and around the pool area. Restaurant machinery with
shorted lifecycle due to lime deposits.

Installed by: Wasaco Spain

Results: The Limetech 55 system has operated flawlessly ever
since it was installed. No complaints, no service
requirements. Previous scale issues have not occurred
since the installation. Resident's talks about a felling of
freshness with vortex processed water

*"Taking a shower is a hole new experience, a smooth and soft shower
that takes me back to my first visit in Stockholm back in 1963"*

Conclusion: The Limetech 55, LTC-55 is working as expected; Water
heaters and fixtures are benefiting, no new lime deposits
on the area. Dishwasher is back to normal results and
washing machines have improved results. Restaurant
machines will benefit normal lifecycle.
